

“I have a great idea for a project, but I don't have the money to buy the equipment or a quiet room to actually build it.”

User Persona

NAME	GABI				
AGE	19	GENDER	FEMALE	LOCATION	BUCHAREST, RO.
JOB	STUDENT			INCOME	<3000 RON/MONTH

BACKGROUND

SHORT BIO:

Gabi is a 19-year-old first-year engineering student who is deeply passionate about tinkering with robotics, hardware, and 3D design. Living in a cramped, noisy shared dorm, she lacks both the physical space and the disposable income required to buy expensive equipment like 3D printers, soldering stations, or microcontrollers. She is highly motivated to build things but constantly hits a wall due to a lack of accessible, affordable workspaces and relies entirely on community resources to bring her tech projects to life.

LIFESTYLE AND VALUES:

Fast-paced, budget-conscious, and highly digital. Gabi manages her entire life, including classes, work shifts, and social life, through her smartphone. She frequently studies in public libraries or inexpensive cafes, but these places do not allow her to solder, 3D print, or build hardware. She needs a dedicated, drop-in space that fits her erratic student schedule. She believes information and technology should be shared. She thrives in environments where people help each other troubleshoot code or hardware issues.

PROFESSIONAL CONTEXT:

Full-time student and amateur creator looking to transition into a professional engineering or tech role in the next few years. She knows that a standard resume is not enough to land a competitive tech internship. She needs a strong, tangible portfolio of real-world projects like custom robotics, IoT devices, or 3D-printed prototypes.

BEHAVIOR AND PERSONALITY

PERSONALITY TRAITS:

- Gabi is highly independent, pragmatic, and naturally curious. She learns best by getting her hands to work and making mistakes.

DIGITAL BEHAVIOUR:

She is a digital native who prefers immediate, asynchronous communication. She will always choose an in-app notification, a quick text, or a Discord message over a phone call or a formal email.

DECISION-MAKING PATTERNS:

She is a heavy researcher. Before committing to visiting a new location, she will comb through the app to verify the exact specifications of the equipment available and read any available reviews or comments from other students to ensure the space is welcoming

ABOUT THE SPACE:

- Se just wants functional equipment in a welcoming environment free from corporate gatekeeping.
- Sustainability: She is big on upcycling, fixing broken electronics, and reducing e-waste → wants to work in an environment that promotes the same value.

AUDIENCE INSIGHTS

Primary Goal: To easily find, reserve, and access a free or highly affordable workstation that has the specific materials and tools she needs for his personal or academic projects.

What she needs? - An App that shows all the available spaces and what they offer.

Requirements: A mobile-friendly interface, real-time availability of seats/tools, and absolute transparency that the space is free or student-budget friendly.

EXPECTATIONS & MENTAL MODEL

Gabi expects the app to work like a movie theater ticketing app or a library study-room booking system. She wants to pick a date, pick a "seat" or tool, click reserve, and get an instant or very fast approval.

She is a high-frequency, returning user. Once she trusts that the app works and the lab is a good environment, she will likely use the platform multiple times a week.
